

## **Preparing Students for Success in a Global Society**

Education today must equip students to thrive in a complex, interconnected world. My goals for fostering global understandings are central to this mission.

- **Developing Global Competence:** In every subject area, I will emphasize the importance of global competence—knowledge, skills, and attitudes that prepare students to engage with global issues. By incorporating project-based learning around global themes and social issues, I can help students develop critical thinking and problem-solving skills necessary for navigating complex societal challenges.
- **Service-Learning Opportunities:** I will engage students in service-learning projects that encourage them to apply their classroom knowledge to real-world contexts, fostering a sense of purpose and social responsibility. Collaborating with community organizations for outreach projects, students can gain valuable insights about their community while learning to collaborate and communicate effectively.
- **Encouraging Environmental Awareness:** Integrating discussions about sustainability and environmental issues into the curriculum will be a priority. By educating students about environmental responsibility, I will encourage them to think critically about their impact on the planet. Projects could include school community gardens, waste reduction initiatives, or partnerships with local environmental organizations.
